job_ready 待定问题 · Open Questions

后端 v0.4 · 2026-11-08 · Hack the Change 2026 | Back end v0.4 · Nov 8, 2026

一、需要团队决定 / A. Decisions for the team

#	中文	English
1	部署与前端连接 后端和 MySQL 部署在哪里，前端才能连上？谁负责？CORS 允许的前端地址（app.cors）要填什么？ 建议：演示前可先在一台电脑本地运行；开发时 CORS 填 http://localhost:5173。	Deployment and front-end connection Where do we host the back end and MySQL so the front end can reach it, and who owns it? Which front-end URL goes into the CORS setting (app.cors)? Suggested: For the demo, run it locally on one laptop; use http://localhost:5173 for CORS during development.
2	问卷最终问题 GET /profile/questions 现在只有 5 个占位问题（q1–q5）。最终问哪些问题、几道题、选项是什么？ 建议：前端和产品一起定好文字后发给后端，改一个常量文件即可。	Final questionnaire questions GET /profile/questions only has 5 placeholder questions (q1–q5). Which questions, how many, and which options do we use? Suggested: Front end and product agree on the wording and send it to the back end; it is one constant file to change.
3	导师规则与积分 maxChatsPerWeek（每周最多几次咖啡聊天）已保存但没有强制执行。每完成一次聊天给导师 +10 分，这个分数用来做什么？ 建议：黑客松版本可以只展示积分；如需限制每周次数，后端再加检查。	Mentor rules and points maxChatsPerWeek is stored but not enforced. Mentors get +10 points per completed chat; what are the points for? Suggested: For the hackathon, just show the points; if we want the weekly limit, the back end adds a check.
4	真实机会数据 现在 20 条机会全是虚构的测试数据。真实数据从哪里来（手动录入、公开网站、API）？ 建议：演示时手动录入 20–30 条真实的卡尔加里/远程岗位。	Real opportunity data All 20 opportunities are fictional test data. Where does real data come from (manual entry, public sites, an API)? Suggested: For the demo, enter 20–30 real Calgary or remote postings by hand.
5	正式登录与 demo 模式 本地现在开着 demo 模式：没有 token 就当作 admin。上线/演示时是否关闭？关闭后必须设置环境变量 JWT_SECRET。 建议：前端接好登录后关闭 demo 模式。	Real login vs demo mode Demo mode is on locally: no token means admin. Do we turn it off for the demo or deployment? If so, JWT_SECRET must be set. Suggested: Turn demo mode off once the front end has login working.

6	数据库负责人 头脑风暴记录写的是 Bruno，PDF 写的是 Delina，谁负责数据库？ 建议：团队确认一位，方便以后改表。	Database owner The brainstorm notes say Bruno, the PDF says Delina. Who owns the database? Suggested: The team names one person so table changes have an owner.
7	模拟面试是否演示 模拟面试是加分项（stretch goal），后端已完成。前端是否做页面并在演示中展示？ 建议：时间够就做，不够就先跳过。	Mock interview in the demo? The mock interview is a stretch goal and the back end is done. Does the front end build a page and show it in the demo? Suggested: Build it if there is time; otherwise skip it.

二、接口细节，待确认 / B. API details to confirm

#	中文	English
1	POST /profile 允许空答案 answers 可以是空列表，AI 会生成一份几乎空的档案。要不要要求至少回答几题？	POST /profile accepts empty answers answers may be an empty list, which gives an almost empty profile. Should we require a minimum number of answers?
2	POST /mentors 整卡覆盖 再次调用时，没有传的字段会被清空。前端要每次发送完整的导师卡片，还是后端改成只更新传了的字段？	POST /mentors replaces the whole card Calling it again clears fields that are left out. Should the front end always send the full card, or should the back end only update sent fields?
3	问卷接口需要登录 GET /profile/questions 需要 token。如果想在注册前展示问卷，需要改成公开接口。	Questionnaire needs a token GET /profile/questions needs a token. If we want to show it before sign-up, it has to become public.
4	退出登录 token 有效期 7 天，服务器不保存，退出登录就是前端删掉 token。这样可以吗？	Logging out Tokens last 7 days and are not stored on the server, so logging out means the front end deletes the token. Is that enough?
5	AI 免费额度 Gemini 免费额度有速率限制，忙时可能慢到约 20 秒或返回 502。前端需要加载状态和“重试”按钮。演示时用谁的 API key？	AI free tier The Gemini free tier is rate limited; when busy it can take about 20 seconds or return 502. The front end needs a loading state and a retry button. Whose API key do we use for the demo?
6	AI 只输出英文 简历、建议、开场白等 AI 内容都是英文。是否需要其他语言？	AI writes English only Resumes, suggestions, icebreakers and other AI output are in English. Do we need other languages?

三、已经决定（供参考） / C. Already decided (for reference)

#	中文	English
1	基础简历每人只有一份，再次生成会覆盖（同一个 id）。	Each user has one base resume; generating again overwrites it (same id).
2	定制简历接口改为 POST /resumes/tailor，并可用 GET /resumes/{id}/pdf 下载 PDF。	Tailoring moved to POST /resumes/tailor; download the PDF with GET /resumes/{id}/pdf.
3	API 文档已更新到 v0.4；Apifox 导入文件里的接口名称已改好（不再是 get_1、list_1）。	API docs are now v0.4; endpoint names in the Apifox import file are fixed (no more get_1, list_1).
4	全部 8 个 AI 功能都已接入真实的 Gemini。	All 8 AI features now use real Gemini.
